Title of the Invention

Gas Turbine, Particularly an Aircraft Engine

Field of the Invention

The invention relates to a gas turbine, particularly an aircraft engine according to the preamble of patent claim 1, having at least one electrical generator incorporated into the engine particularly into an engine compressor.

Description of Related Art

In addition to the forward thrust for advancing [(the)] an aircraft, aircraft engines, whether commercial aircraft engines or military aircraft engines, also produce energy for the supply of attachment devices and secondary aggregates, operating of attachment devices and secondary aggregates, respectively, of [(the)] a gas turbine aircraft engine or for the supply operating of aircraft-borne systems such as an air conditioning system. The attachment devices, secondary aggregates or even aircraft-borne systems of driven by an
